

Protect your natural stone with our range of environmentally friendly water based cleaners and sealers.

Our range of water based cleaners and sealing products are environmentally friendly yet tough enough to clean oils, fats and liquids from stone and provide a barrier to prevent serious stain damage. Stoneuk Guard provides a superb level of care that will ensure your natural stone will remain stunning with the minimum of care.

To sustain the beauty of your stone we recommend that your stone is sealed as soon as it is laid. Before applying Stoneuk Guard the stone should be cleaned thoroughly ensuring that no stains or algae remain. Any stubborn stains can be removed with Stoneuk Guard HD although for normal grime and grease Stoneuk Guard MP is perfectly suitable. Once clean several coats of Stoneuk Guard FC is applied to the stone. The properties of Stoneuk Guard FC are such that the molecules of the sealant penetrate the stone and anchor themselves to the fine grains that form the stone. As a consequence the porosity

of the stone is reduced and a barrier is created which prevents spillages penetrating deep into the stone.

Once sealed with Stoneuk Guard your stone should remain protected for about 18-24 months depending on the footfall within the sealed area. Maintenance during this period should be minimal and only associated with seasonal cleaning regimes. Any accidental spills can easily be removed using Stoneuk Guard Multi Purpose Cleaner and degreaser.

Stoneuk Guard is available to buy off the shelf. Alternatively stoneuk offer a complete maintenance service. Our team of dedicated professionals are skilled at sealing, cleaning and fixing damaged stone. At stoneuk we are passionate about stone and are only too happy to help keep your natural stone looking beautiful.

Stoneuk Guard is an environmentally responsible and sustainable cleaning agent that uses a new generation of protective materials designed especially for shielding natural stone from environmental and accidental exposure to oils, fats, dirt and grime.

This new technology has been cleared for commercial use by governments and regulators worldwide due to the products favourable environmental, health and safety profile.

Stoneuk Guard is a new coating product that provides an alternative to solvent based repellent treatments currently available, such coatings are subject to increasing sales restrictions and negative consumer perception.

Stoneuk Guard is a water miscible fluoropolymer dispersion designed for application to porous hard surfaces. Properly applied Stoneuk Guard imparts excellent water, oil and stain repellent properties to these substrates. The substrates natural characteristics are generally unaffected by the application of this product they are normally enhanced and protected. Stoneuk Guard creates a protective thin barrier below the surface of the stone. The molecules of the sealant anchor to the substrate thus preventing liquids and oils penetrating deep into the stone. The characteristics of the treatment causes spills to bead on the surface of the stone allowing for easy removal. Furthermore the barrier prevents liquids penetrating deep into the stone which can cause permanent staining.

Before sealing ensure that the stone is cleaned to

a satisfactory level**. Stoneuk Guard can easily be applied to stone using a decorating roller or mop. Several coats are required to ensure that the stone is sufficiently sealed. The porosity of the stone will determine how much coverage is achieved. Sealing is best achieved in dry conditions, once sealed spills will bead on the surface of the stone and can easily be removed with a damp cloth. Stubborn stains can be removed with Stoneuk Guard Multi Purpose Cleaner and degreaser.

- **Protective barrier prevents deep staining**
- **Prevents stains from oil, fats, dirt and grime**
- **Spills bead on stone surface**
- **Environmentally friendly**
- **Water based**
- **Provides upto 24 months protection**
- **Coverage approx 7m2 to 1 litre of sealant***

* Coverage will vary depending on the porosity of the stone, weather and temperature. The values calculated were based on application of stoneuk guard fp sealer to sandstone in mild overcast conditions.

** Ensure that stone is cleaned prior to sealing. Any stains or dirt will be sealed in once Stoneuk Guard FP has been applied and will be extremely difficult to remove.

Fluoropolymer Coating

from only
£5.99
litre

Stoneuk Guard Heavy Duty is a low odour aqueous cleaner that is biodegradable and environmentally friendly. For heavy spills of oils, fats, dirt and grime simply apply the cleaner to the problem area.

The properties of the cleaner break down oils, fats, dirt and grime and are then suspended in an emulsion which allows for easy cleaning.

Stoneuk Guard contains an alkali which is ideal for cleaning stubborn stains. Due to the porosity of unsealed stone some liquids if left to dry can penetrate deep into the substrate. For such stains agitation with a stiff brush may be required however, Stoneuk Guard is an ideal solution for removing most stubborn stains on unsealed stone.

At stoneuk we recommend that unsealed stone is thoroughly cleaned with Stoneuk Guard HD making sure that no stains remain. Once the stone has been cleaned to a high standard the stone should be sealed using Stoneuk Guard FP, this will ensure that the stone is protected with an invisible barrier against oils, fats, dirt and grime.

Once the stone has been sealed minimal cleaning can be carried out using Stoneuk Guard Multi Purpose Cleaner as and when required.

- Deep cleaning
- Low odour
- Environmentally Friendly
- Biodegradable
- Water based
- Does not contain solvents
- Non flammable
